

Henry Moseley

Henry Moseley

Henry Moseley 1887-1915

Henry Moseley was an English physicist who discovered the relationship between the atomic number and the wavelength of the X-rays emitted by an element. He is known for his discovery of the periodic law of elements, which states that the properties of the elements are a periodic function of their atomic numbers. He also discovered the Moseley's law, which states that the square root of the frequency of the X-rays is proportional to the atomic number of the element.
